

## NEWS RELEASE

### CliniComp Unveils Essentris™, New Name for its Clinician Documentation with EMR System

**SAN DIEGO- November 10, 2003-** CliniComp, Intl., a recognized leader of advanced, hospital-wide clinician documentation systems, today announced the rebranding and renaming of its clinician documentation and EMR suite to Essentris™, formerly WinCIS. Essentris™ solutions serve as the foundation for advanced clinical processes.

Reflecting its essential role in improving clinical processes, Essentris™ offers a unique approach to provide a comprehensive view of the patient by collecting all clinical data into a single EMR. At the heart of Essentris™' architectural design is its adaptability across hospitals, departments within hospitals, and even across international boundaries. This is accomplished through a basic data base model capable of change and supported by robust configuration tools.

Essentris™ solutions work seamlessly together to provide clinical charting, computerized provider order entry, electronic medication administration record, results reporting, a global data repository, and decision support tools. Aimed at the in-patient setting, products within the suite include Essentris™ Critical Care, Essentris™ Perinatal, Essentris™ Acute Care , Essentris™ ED, Essentris™ CPOE, and Essentris™ GDR.

“We believe that we’ve built the highest quality and most complete hospital-wide clinician documentation and EMR system on the market,” said Chris Haudenschild, President and CEO of CliniComp. “We wanted a name that reflected our system’s uncompromising performance, reliability and adaptability to individual medical facilities.”

#### **About CliniComp**

Founded in 1983, CliniComp, Intl. is a pioneer in its field, developing advanced hospital-wide clinician documentation systems for hospitals, integrated delivery networks, academic medical centers, and other acute care providers. By completely automating the documentation process for each hospital’s patient care environment, manual charting is eliminated. This in turn greatly reduces errors, improves productivity, and allows for better information flow. Automated charting forms the very foundation of the hospital-wide electronic medical record.
